

Senior Fullstack Web Developer

Be part of the change. Join Sinopé.

Sinopé Technologies conceives the smart house of tomorrow. A house that communicates, evolves and responds to consumers' needs by offering them a unique environment in which they can control all their connected devices. The Sinopé house goes beyond simple compatibility. Its platforms and products are made for each other and offer exceptional performance.

We design smart thermostats for the widest variety of heating systems as well as lighting, specialized control and water damage protection solutions. Several other products are in development. We also create platforms and smart devices for various renowned companies in North America. You probably already use products of Sinopé Technologies without even knowing it.

Want to join a dynamic team in a stimulating environment? Apply now for a job in R&D > rh@sinopetech.com

Why should you join us:

We design top quality devices for luxury home automation systems as well as for your neighbor who equips his home one room at a time. Our products are designed to give the most complete control at the best price. Our secret? We are a vertically integrated manufacturer - our supply chain is highly efficient and almost everything is designed in-house. From design to engineering to programming, we offer a product proudly made in Quebec.

What we're looking for:

Leadership, autonomy and initiative. The selected candidate will join a team of 8 programmers and will have the mandate to participate in the development of the various platforms used to control smart devices, both front-end and back-end according to the needs.

Your Responsibilities:

- Participate in the choice of solutions and technologies;
- Produce quality code following best practices and current design patterns, as well as current design patterns, procedures and IT standards;
- Ensure the security and stability of the various modules;
- Diagnose and resolve problematic usage situations;
- Validate programmed functions through unit testing;
- Define or participate in the definition of the content of key project objectives;
- Work in an agile environment and contribute to the success and agility of the team.

Essential Skills:

- Collaborative, resourceful and autonomous;
- Customer Focus;
- Proven oral and written communication skills;
- Versatile and team player;
- Good analytical skills;
- Organized and meticulous.

Qualifications:

- DEC or Bachelor's degree in IT or equivalent;
- 5 years of work experience in similar technologies
- Experience with Angular/React and NodeJS
- Experience with Database Technologies such as SQL/NoSQL(MongoDB), Redis
- Knowledge of REST architecture;
- Experience in writing unit tests and benchmarking;
- Knowledge of version/source control systems(GIT), Code Reviews
- Ability to adapt in a fast-paced Agile development(Scrum) environment
- French & English.

Assets:

- Native Android and IOS application design experience;
- Knowledge of AWS environment;
- Familiarity with Linux environment;
- Knowledge of AMQP/RabbitMQ broker.

What we offer:

- A dynamic and fast-paced environment where decisions are made efficiently;
- The opportunity to work with a multidisciplinary team;
- The opportunity to evolve in a high-growth market in a stimulating environment.

Other benefits:

- Various activities and surprises organized every month;
- Young and dynamic team, friendly environment;
- Quality of life: a healthy and stimulating work environment focused on work-family balance and the well-being of employees;
- Group insurances;
- Registered Retirement Savings Plan (RRSP) Employer Matching Program (RRSP);
- Training and professional development.

Starting date: as soon as possible

Full-time position: 37.5h/week
